Ruby Origin Report

GIA Report 5231967246

June 01, 2026

Image is not to scale. Color is approximate.

Ruby

Ruby is the red variety of the mineral corundum. The name comes from the Latin word for red, ruber. Early cultures valued ruby because its color is similar to blood, leading to the belief that it held the power of life. The most famous source of ruby is Myanmar (formerly Burma), but other significant sources include Mozambique, Vietnam, and Thailand.

Characteristics

Mineral	Mohs Hardness	Toughness	Birthstone
Corundum	9	Excellent	July

Details

Item Description

One loose stone

Weight

2.06 carats

Measurements

6.52 x 5.64 x 5.10 mm

Shape

Oval

Color

Red

Transparency

Semi-Transparent

Phenomenon

Displaying Asterism

Cutting Style

Double Cabochon

Results

Species

Natural Corundum

Variety

Natural Star Ruby

Geographic Origin

Burma (Myanmar)

Additional Results

No Indications of Heating

Comments

Any statement on geographic origin is an expert opinion based on a collection of observations and analytical data.
