Ruby Report

GIA Report 2235892035

March 20, 2026

Image is not to scale. Color is approximate.

Ruby

Ruby is the red variety of the mineral corundum. The name comes from the Latin word for red, ruber. Early cultures valued ruby because its color is similar to blood, leading to the belief that it held the power of life. The most famous source of ruby is Myanmar (formerly Burma), but other significant sources include Mozambique, Vietnam, and Thailand.

Characteristics

Mineral	Mohs Hardness	Toughness	Birthstone
Corundum	9	Excellent	July

Details

Item Description

One loose stone

Weight

2.23 carats

Measurements

10.46 x 5.90 x 4.27 mm

Shape

Pear

Color

Red

Transparency

Transparent

Cutting Style: Crown

Brilliant Cut

Cutting Style: Pavilion

Step Cut

Results

Species

Natural Corundum

Variety

Ruby

Geographic Origin

Not Requested

Additional Results

Heated

Comments

None
